(a) Persistent state and executable contract
Household agent
attributes | state | beliefs | goals
Bounded memory
actions | outcomes | trust
Social relations
visible neighbours | network evidence
Policy and market evidence
validity | time | provenance
Typed object–relation–event–evidence contract
legal actions | temporal boundary | exception predicates
Next round
(b) Frozen decision sequence
1 CPU legal-action filter + frozen decision table
Verified base action
2 Hard exception?
Yes
No
5 L2 semantic review
retain or valid exception
3 Coarse candidate?
No
Retain base action
Yes
Retain
4 JEV
route only
Escalate
6 Runtime contract validation
schema | action | evidence | time
7 Commit action
valid selected L2 is final
Environment executes action and updates next state
